COMMON BROOM.

PARTS USED.

The Stalks, Flowers, and Seeds.

PREPARATIONS

a ſpid Salt.

PLACE.

Is on Heaths, Commons, and Waſte Grounds.

TIME.

It bloſſoms in April and May

DESCRIPTION.

The Roots are thick, woody, running ſo deep in the Ground that tis difficult to root out. The Stalks 1, or woody Part of the Shoots is round with a ſmooth full green Bark; with five Corners 2, where tis cut Transversly. The Leaves are a ſmall Trefoil, as on the Stalks, and at 3, of a dull blueiſh Green, cover'd with very ſhort white Hairs. The Impalement is a very thin Cup, that extends itſelf with Points above and below, which ſhorten as the Flowers grow: ſee them on the Flower-Buds of different Growths. The Flowers 4 are a very fine warm Yellow, looking ſoft like Velvet, at 5 is a Flower cut half away, which ſhews the Seed-Veſſel, &c. The young Pod is enclosed in a very thin whitiſh Skin, that divides into eight Parts 6; forming four long and four ſhort Chives, from whoſe Center grows the Style, that is very long, hairy, turnid round 7. The Summits are long, the Farina is very ſmall and Yellow; one Side of the Pod 8 with the Seeds that are ſmooth, ſhining, and compreſſed on the Sides 9.

VIRTUES.

Broom infuſed in Beer or Wine, being Diuretic is allowid to be good againſt Dropſy and Jaundice, tis often burnt and the Aſhes infuſed in Wine, which when filtred is drunk for the ſame Intention; being thought a more powerful Remedy.
